

Help show what’s possible. Put yourself on the map of measured change in soil carbon.

In January 2010 the Soil Carbon Coalition began building a web-based map of measured change in soil carbon or organic matter. If you have repeated measurements, and are willing to put yourself on the map, please contact us with the following information. For examples, see soilcarboncoalition.org/changemap

Landowner _____

Address, phone, email _____

Manager (if different) _____

Address, phone, email _____

Name of project or farm (we’ll use this as the label) _____

We need **at least two** measurements at the same place (averages for multiple sampling), separated by a year or more. If you need help on data, leave it blank and we will contact you.

Soil carbon measurements

latitude and longitude	date of sampling	depth of sampling	percent organic matter	percent carbon	bulk density

Please include some basic information (use other side if needed):

Landscape and topography _____

Notes on sampling/testing _____

Your story (notes on management) _____

Did you use offsite carbon such as bedding, manure, compost, or biochar? About how much? _____

Links to photos, videos, websites, further information on the above _____

I hereby give my permission to Soil Carbon Coalition and its license holders (we use Creative Commons) to display the above true and correct data publicly on their websites and other media. **Note: we will not display your name or contact information.**

Signed _____ Date _____

Thank you!
